ning of each regular issue of the PCT Gazette.*

(54) Title: ANKTM1, A COLD-ACTIVATED TRP-LIKE CHANNEL EXPRESSED IN NOCICEPTIVE NEURONS

(57) Abstract: The methods and compositions of the invention are based on a method for measuring nociceptive responses in ver-  
tebrates, including humans and other mammals utilizing a newly discovered thermoreceptor belonging to the Transient Receptor  
Potential (TRP) family of non-selective cation channels that participates in thermosensation and pain. This receptor, designated  
ANKTM1, is associated with nociceptive pain, such as hyperalgesia. Accordingly, the invention provides isolated polypeptides and  
polynucleotides associated with nociception as well as methods for identifying or screening agents that modulate nociception.
